SMART

Text Miner

A tool to discover lost knowledge.

The **SMART Text Miner** is a sophisticated software tool to extract hidden knowledge from legacy texts.

The **SMART Text Miner** is ideal for the creation of terminology lists, taxonomies and glossaries for Knowledge Management (KM), eLearning, Controlled English, Computer-aided Language Translation, Translation Memory, Help Desks, Global Call Centers, Six Sigma QA, Technical Training, Customer Relationship Management (CRM), Research, Business Intelligence (BI) and Litigation Support.

The **SMART Text Miner, Version 3.0,** does a labor-intensive task in minutes, not months. The tool is easy-to-use with a click-and-point interface.

The SMART Text Miner reads these formats:

- Microsoft WORD2000
- WordPerfect2000
- FrameMaker6.0/7.0
- XML & Corel XMetaL
- Arbortext Epic SGML
- HTML Web pages
- Interleaf ASCII texts
- All ASCII texts
  (Multiple languages)
- Data base text extracts
- Help files
- Audio transcriptions
- Custom formats by request

A tool to discover lost knowledge.

In the example, the **SMART Text Miner** identifies computer terminology to create a custom, **Controlled English** dictionary. The **SMART Text Miner** also finds the small problems that can cause the expensive errors.

Controlled ENGLISH

The **SMART Text Miner** was developed by the software team at **SMART Communications, Inc.** This unique tool was designed to create dictionaries for **Controlled English** programs.

The **MAXit Checker** and the **SMART Translator** software are examples of tools that use the **SMART Text Miner** output. Customers continue to find other uses in the fields of Knowledge Management, Linguistics and Natural Language Processing.

How to Learn Text Mining . . .

SMART offers classes on the use the **SMART Text Miner** for lexicography, terminology extraction, categorization and Knowledge Management. SMART offers either a text mining service or software licensed on a server.
