MAXit for XMetaL is an interactive text critique "plug-in" for Corel® XMetaL®. **MAXit** uses *artificial intelligence* techniques to analyze texts. This analysis uses a **Controlled English (CE)** vocabulary with grammar, syntax and style rules.

How the MAXit Checker works...

The writer selects either an element or group of elements. **MAXit** uses custom dictionaries and extensive grammatical and syntactical rules to critique the text electronically.

The errors are displayed in context with color-coded messages, suggestions, corrections and synonyms, as shown below.

The writer can use all the **XMetaL** edit functions and the **MAXit** functions interactively.

Controlled ENGLISH

CE is a small, controlled, technical English vocabulary designed to write global product support documentation. **Controlled English** removes ambiguity to increase the usability and readability of texts. Texts written in CE are easy-to-understand in 131 countries.
